Allowable Subject Matter

- 1. Claims 2-7, 11-12, and 17-28 are allowed.
- 2. The following is an examiner's statement of reasons for allowance: The prior art Kobayashi et al (US 6,862,019 B2) fails to teach the coordinate input apparatus, wherein the predetermined coordinate values are first effective coordinate values during a continuous input period in which coordinate input is continuously executed, and the apparatus further comprises storage means for storing the first effective position coordinates calculated by the calculation means during the continuous input period as the predetermined coordinate values as claimed in Claims 2, 17, 22.

The prior art Kobayashi et al (US 6,862,019 B2) fails to teach the coordinate input apparatus, wherein <u>a display apparatus</u> overlaps on the coordinate input apparatus, and the first axis defines a normal direction to a display area plane of the display apparatus, and the second and third axes define the display area plane of the display apparatus as claimed in Claims 3,18,23.

The prior art Kobayashi et al (US 6,862,019 B2) fails to teach the coordinate input apparatus, wherein the coordinate output form further includes a relative coordinate processing output form in which at least a differential coordinate value between the coordinate value of the second axis and the predetermined coordinate value is multiplied and output as claimed in Claims 4,19,24.

Application/Control Number: 10/620,573

Art Unit: 2629

Also, prior arts Kobayashi et al (US 6,862,019 B2) fails to teach the coordinate input apparatus, wherein switch state determination means for determining operative states of a plurality of switches of the coordinate input pointing tool, and the coordinate output control means for outputting the position coordinates or the differential coordinate values between the position coordinates and the predetermined coordinates or inhibits output of the position coordinates on the basis of the determination result of the determination means and a determination result of the switch state determination means as claimed in Claims 11,20,25.

Also, prior arts Kobayashi et al (US 6,862,019 B2) fails to teach the coordinate input apparatus, wherein the predetermined coordinates are first effective coordinate values during a continuous input period in which coordinate input is continuously executed, and the apparatus further comprises storage means for storing the first effective position coordinates calculated by the calculation means during the continuous input period as the predetermined coordinates as claimed in Claims 12,21,26.

The closest prior art, Kobayashi et al (US 6,862,019 B2), either singularly or in combination, fail to anticipate or render the above bold and underlined limitations obvious.
